

### Extreme 32 – Testimonials and Comments.

“Rainbow Shade has brought another high quality shade fabric to the market and we will be looking forward to its launch and using more of it!”

**Warren & Leah – Shadetech – Darwin.**

“This is a very good fabric which is easy to handle and easy to sew. It performed well during installation and I am very happy with the end result!”

**John – Total Shade Solutions.**

“This fabric was very easy to use at every stage! From the manufacturing, transportation right through to the installation. I'm very pleased with the three shade sails which we have made in the Extreme 32 fabric so far! It has the feel of the other Rainbow fabrics with more strength.”

**Mal – Port Douglas Sailmakers.**

#### **Other comments on manufacturing with Extreme 32 from a shade professional.**

- Extreme 32 has nice even selvages, sits flat on the floor and keeps its form when being lapped.
- Extreme 32 sews nicely along the warp, weft and bias; a lot of fabrics are more challenging.
- Extreme 32 stretches in both directions more evenly in comparison to other commercial grade fabrics.
- Extreme 32 'looks & feels' heavy duty when handled (should satisfy those that think thick is best!). Very even in tone & weave.
- Extreme 32 was good to handle on site and stretched evenly. The structure it went on was a square dome so we would have noted sagging more easily but we did not experience any.
